

Scott Callaway

Appleby, Sheepy Parva, CV9 3RL

A passionate Web Developer with experience working in teams (through agile practices) as well as independently whilst consistently producing results in multiple industry sectors. With over 4 years experience with JavaScript Frameworks as well as supporting knowledge in back end full MVC technologies.

Skills

Throughout my career, I have developed skills across the entire tech-stack including the following:

- ReactJS/Redux
- AngularJS/Angular 2+
- EmberJS
- Typescript
- HTML, CSS, ES6
- Webpack
- Parcel
- Zend Framework
- Laravel
- NodeJS
- MySQL
- nginx
- Firebase
- REST frameworks; Springboot, Express
- iOS, Swift
- Git
- AWS (DynamoDB, Lambdas, IAM, S3 Buckets)
- Jenkins
- GDS
- CircleCI

Experience

UI Engineer - [reinfer](#)

Oct. 2019 - Present
London (UK)

Enterprise

I'm working with a small Front end team developing and enhancing React components in order to deliver a solid user experience on the platform.

Software Engineer - [Capgemini UK](#)

Sep. 2015 - Oct. 2019
London, Leeds, Birmingham, Woking (UK)

Postal Services

Front End Lead

- Was the main source of both Angular and React knowledge for both on-shore and off-shore developers
- Provided insight into estimates for Front End work on multiple project inceptions

Utilities

EmberJS Developer

- Working with a highly efficient scrum team in order to rapidly develop a whole new login flow for users interfacing with multiple other platforms
- Completed a reCAPTCHA upgrade to version 3 creating brand-new reusable components for other EmberJS developers.
- Played a large part in the onboarding of other developers to get them up to speed quickly

Government

Full Stack Web Developer

- Building on top of an old monolithic codebase using the Zend PHP Framework

- Constantly iterating based on customer feedback whilst utilising the Government Design System (GDS)
- Developed both the frontend UIs as well as backend business logic to satisfy functional requirements.

Industrial Equipment

ReactJS Developer

- Worked with another developer on a high-intensity, two-week project to deliver key functionality for a client.
- Interfacing with DynamoDB on the AWS platform as well as gaining key experience in Lambdas, S3 Buckets and IAM.

Postal Services

Angular Developer

- I worked as part of a small team in order to build angular applications that were housed within a Drupal website
- This included both monolithic and RESTful approaches to Software Development
- The main focus was upgrading existing flows as well as creating new user journeys

Front End Lead

- Worked as the primary point of contact onshore for the client whilst maintaining offshore Angular Developers.
- I was a key source of knowledge for other React projects that were ongoing at the time overseeing development with regular code reviews.

Automotive

ReactJS Developer

- I worked as part of a small agile development team in order to deliver a series of Web applications to digitise the workflows of engineers on the production line.
- These interfaced with a Java Spring backend whilst using the latest ReactJS and Redux versions which, for the time, was bleeding edge.
- Alongside this, one version of the applications was ported to mobile through Cordova so the engineers had access to the app at all times.

Early Life Support

- Aided in the procedure for the applications going live as well as providing early life-support.

Email: scott@scottcallaway.co.uk

Tel: +44 79100 79522

- This involved working under pressure to fix bugs caught in the live environment in a time-critical manner whilst maintaining a high level of code quality on the fixes themselves.

iOS Developer

- I worked individually on a proof of concept native application for iOS as a thought experiment for employees.
- This interfaced with the Google Contacts API in order to store and retrieve information for client devices.
- The PoC was fully created in 3 weeks with no prior knowledge of mobile development or the Swift Language.

Apprenticeship

I joined as the first intake of Degree Apprentices combining the workloads of both University as well as full time working. I very quickly gained an interest in Web Development and have proceeded to make that my specialty.
